Installing R

R is a programming language and cannot be downloaded from the App Store etc. Its a slightly different installation process.

To make R run on your system, you need to do two things. 1. Install R (the language) 2. Install R Studio

Well, technically you can get away without doing step 2 but that is a discussion for another day. For now lets say you need to do both.

To install R Go to the following website and download R for Windows or Mac

<https://www.stats.bris.ac.uk/R/>

For Windows , Click on : R for Windows ———> Install R for the first time ———> Download R 4.1.3

To install R Studio

Go to the following website and install R Studio

<https://www.rstudio.com/products/rstudio/download/>

Click on the Download button on R Studio Desktop Free.

Follow the installation process for both files.

Congratulations. You have successfully installed R.
